HOCKEY

At H&A we produce hockey surfaces to suit the requirements of our clients, varying from multi-use sporting surfaces with or without shock absorbency pads to full FIH hockey fields. Our sand and water based systems have been tested and receive full endorsement by the FIH (Federation International Hockey) and approval from Hockey NSW.

Aquaturf hockey products ensure that the game of hockey is played in such a way as:

- To facilitate a proper reflection of team merit in competition
- To provide an opportunity for players to display and develop their hockey skills
- To offer comfort and limit danger to players
- To extend playability in adverse weather conditions

The permanent lines, controlled drainage and low maintenance characteristics provide an environmental sound investment that increases club revenue.

About Us

We are the longest established specialist sports surface company in the country and have been at the forefront of the installation and maintenance of synthetic sports surfaces since 1973.

We have a vast amount of experience in the installation, maintenance and rejuvenation of every type of synthetic surface.

Each year we install over 100,000 square metres of new ground surface and rejuvenate dozens of hockey pitches, tennis courts and football pitches.

Our highly skilled crews are in demand all over the world and we have installed sports surfaces in France, Madeira, the West Indies, South Africa, Martinique and Eire as well as the UK.

We work with leading manufacturers across the world.

Our mission is to provide you with an installation and maintenance service that is second to none.
